FIGURE 1: Tableaux de Young Associé à la suite d'entiers (4,2,2,4):

Pour un endomorphisme tel que $d_1 = 2$, $d_2 = 4$, $d_3 = 5$, $d_4 = 6 = d_5 = d_6 = ---$

On a
$$g(A) = 7$$
 et $d_1 = dim(Ker(A)) = 3$
Ensuite, $A^2 = \begin{cases} 0.01 & 0.01 \\ 0.00 & 0.01 \\ 0.00 & 0.01 \end{cases}$

On a ry(A)=3 et $d_2=dim(Ker(A^2))=7$.

On a rg(A)=1 et $d_3=dim(Ker(A^2))=9$. Puis $A^3=0$. On a donc le tableau de Young suivant:
